Dear Hiring Manager,

My name is Katinka Lennemann. I'm a graduating senior at UCLA with a double major in Applied Mathematics and Statistics & Data Science, and I'm excited to apply to this Climate Corps position as a Operations Analyst with Capitol Corridor.

Technically speaking, I'm well versed in data mining and statistical modelling, skills I've used not only in classes but also directly for external clients. My courses in entrepreneurship and consulting connected me to external clients, where I led teams doing statistical analysis for external clients that needed technical assistance. From my experience as an intern at the San Mateo County Sustainability Department, I also worked with school district officials where I helped them accelerate the transition toward building decarbonization through providing data, information and resources, with an emphasis on providing resources to uplift low-income districts. In this role, I also worked with publicly available data such as on GripUp and the Alternative Fuels Data Center in order to identify high-need locations for EV charging locations, especially those in low-income areas. These skills in working with and processing large datasets to serve the public would translate very well into this role as an operations analyst.

This role sticks out to me though because I grew up in the Bay Area on the peninsula, and throughout my 8 years of middle school and high school, I took our public transport system a total of three times. It was simply too hard to get to, and not well connected enough. But after extensive experience taking the LA Metro everywhere in during college in LA (as well as experiencing what incredible public transport systems are like in Asian countries like Singapore and Taiwan!), I see such room for growth. The Bay Area has some unique challenges with regard to public transport like being much more spread out and not centrally concentrated, and I would love to help carry out surveys to gather public input and set up mathematical models to help optimize service to increase ridership. I would love to take my technical skills in working with data and continue my experience in serving the public.

Thank you for considering my application!

Sincerely,  
Katinka Lennemann
