Dear Hiring Manager,

My name is Katinka Lennemann; I am a graduating UCLA Applied Mathematics and Statistics student, with a deep interest in working in local government sustainability. I'm excited to apply to this position of Sustainability Specialist with the Climate Protection Team! Not only did I grow up in the Bay Area where I have developed knowledge and understanding of this community, I also had the privilege of working on the Climate Protection Team under Susan Wright during the summer of 2025. At that time, I worked on supporting the implementation of BayREN and SMCEW programs around the county. I found great joy in working in local government, where I was able to work with wonderful colleagues, see the direct impact of my work, and work in a county department that values innovation in the implementation of clean energy solutions at scale, which I find incredibly important at this period of the climate transition.

Since my time as an intern, I have further developed my technical and sustainability skills. For my statistics capstone, I lead a team serving as technical assistance for a client from UCLA Health in analyzing self-reported questionnaire data, skills in client management and data analysis that would be very applicable for this role. I would love to use this expertise to provide the county with clear and communicable data by which to improve BayREN and SMCEW. I also audited a class on environmental regulation and policy; this class taught me how clever policy can be incredibly instrumental in improving environmental conditions. I want to bring that same edge towards making programs that serve the county's constituents well. I've also served as a curriculum coordinator for the development K-12 climate resources for the State of California, where I handled outreach to subject matter experts to inform content, analyzed and visualized data for a general audience, and developed a wide variety of content. These skills in program coordination and communication would make me do well in this role!

It's no small task to figure out how to improve the energy efficiency and carbon footprint of an entire county; I would love to return and continue working on these challenges to make San Mateo County a more climate resilient place.

Thank you for considering my application.

Sincerely,
Katinka Lennemann
