Dear Hiring Manager,

My name is Katinka Lennemann. I'm a graduating senior at UCLA with a double major in Applied Mathematics and Statistics & Data Science. I'm excited to apply to this position as a Statistician and continue my time at UCLA.

From my position as an intern at my county's Sustainability Department, I worked to identify high need locations for EV charging stations by integrating multiple data sets, including public charging density data, demographic data, and census tract files. I carried out this project by querying and cleaning data in Excel, and then integrating in ArcGIS to create a interactive map for decision makers to better have access to EV charging information. I also created a dashboard aggregating performance metrics for 15 clean energy programs in the county using Excel, tailoring the dashboard so it can easily be updated in the future with new data. These experiences taught me how to present in a way that is functional and clear for decision makers and for public-facing programs, a skill that would translate very well into this role.

I've worked with R extensively throughout all my undergraduate classes, and learned how to create reproducible and well-documented work in RMarkdown and Quarto. For my statistics capstone project in particular, I led my team in working with a client on analyzing scarring alopecia questionnaire data. Through working with the client to understand their needs and end-goals, I used statistical tests and methodologies to investigate for significant relationships in the data using Python, documenting my work clearly in Python notebooks. It was incredibly rewarding also to see this project work toward supporting scarring alopecia patients through research, and I would love to contribute these skills toward continuing to work in the healthcare field.

My time as an undergraduate at UCLA has highlighted to me what an incredible public research university it is toward advancing the edge of what's possible in research and public policy. I would be honored to continue working toward analyzing data that makes a positive impact upon the world.

Thank you for considering my application!

Sincerely,
Katinka Lennemann
